

Lesson 5: Características de otros cuadriláteros

Standards Alignments

Addressing 3.G.A.1, 3.OA.C.7

Teacher-facing Learning Goals

- Draw examples of quadrilaterals that are not rhombuses, rectangles, or squares.
- Understand that shapes can be in more than one category.

Student-facing Learning Goals

- Describamos y dibujemos figuras de grupos específicos.

Lesson Purpose

The purpose of this lesson is for students to use their knowledge of geometric attributes to name quadrilaterals in different ways and to draw quadrilaterals that are not rhombuses, rectangles, or squares.

In previous lessons, students learned the defining attributes of a rhombus, a rectangle, and a square. In this lesson, students apply that knowledge to name quadrilaterals in multiple ways and to draw quadrilaterals that are not rhombuses, rectangles, or squares.

Throughout the lesson, offer rulers to students if needed to determine if sides have the same length.

This lesson has a Student Section Summary.

Lesson Timeline

Warm-up	10 min
Activity 1	20 min

Teacher Reflection Question

What surprised you about student thinking as they drew quadrilaterals that were not rectangles, rhombuses, or squares?

Activity 2	15 min
Lesson Synthesis	10 min
Cool-down	5 min

Cool-down (to be completed at the end of the lesson)

🕒 5 min

Descríbelo, dibújalo

Standards Alignments

Addressing 3.G.A.1

Student-facing Task Statement

1. Selecciona **todos** los nombres que se pueden usar para describir esta figura. Explica tu razonamiento.

- A. triángulo
- B. cuadrilátero
- C. pentágono
- D. cuadrado
- E. rombo
- F. rectángulo

2. Dibuja un cuadrilátero que no sea un rectángulo, ni un rombo ni un cuadrado.

Student Responses

1. B and E. It has 4 sides, which makes it a quadrilateral. All the sides have the same length, which makes it a rhombus.
2. Sample response: A drawing of a quadrilateral with no right angles and no sides having the same length.
