

Unit 4 Lesson 3: Revisiting Proportional Relationships

1 Recipe Ratios (Warm up)

Student Task Statement

A recipe calls for $\frac{1}{2}$ cup sugar and 1 cup flour. Complete the table to show how much sugar and flour to use in different numbers of batches of the recipe.

sugar (cups)	flour (cups)
$\frac{1}{2}$	1
$\frac{3}{4}$	
	$1\frac{3}{4}$
1	
	$2\frac{1}{2}$

2 The Price of Rope

Images for Launch

length of rope (feet)	price of rope (dollars)
6	7.50
12	15.00
24	30.00
48	60.00
2	2.50
50	62.50

Diagram illustrating a table with two columns: "length of rope (feet)" and "price of rope (dollars)". The rows contain the following data: (6, 7.50), (12, 15.00), (24, 30.00), (48, 60.00), (2, 2.50), and (50, 62.50). Green arrows and labels indicate operations: $\cdot \frac{1}{3}$ on the left and $\cdot \frac{1}{3}$ on the right, with $\cdot 2$ between the first four rows; $\cdot 25$ on the left and $\cdot 25$ on the right, with an arrow pointing from the (2, 2.50) row to the (50, 62.50) row.

Student Task Statement

Two students are solving the same problem: At a hardware store, they can cut a length of rope off of a big roll, so you can buy any length you like. The cost for 6 feet of rope is \$7.50. How much would you pay for 50 feet of rope, at this rate?

1. Kiran knows he can solve the problem this way.

length of rope (feet)	price of rope (dollars)
6	7.50
1	1.25
50	

Diagram illustrating a table with two columns: "length of rope (feet)" and "price of rope (dollars)". The rows contain the following data: (6, 7.50), (1, 1.25), and (50,). Green arrows and labels indicate operations: $\cdot \frac{1}{6}$ on the left and $\cdot \frac{1}{6}$ on the right, with an arrow pointing from the (6, 7.50) row to the (1, 1.25) row; $\cdot 50$ on the left and $\cdot 50$ on the right, with an arrow pointing from the (1, 1.25) row to the (50,) row.

What would be Kiran's answer?

2. Kiran wants to know if there is a more efficient way of solving the problem. Priya says she can solve the problem with only 2 rows in the table.

length of rope (feet)	price of rope (dollars)
6	7.50
50	

What do you think Priya's method is?

Activity Synthesis

length of rope (feet)	price of rope (dollars)
$\cdot \frac{50}{6}$ ↙ 6 ↘ 50	7.50 ↘ $\cdot \frac{50}{6}$

length of rope (feet)	price of rope (dollars)
6	7.50
50	

• 1.25

• 1.25

3 Swimming, Manufacturing, and Painting

Student Task Statement

1. Tyler swims at a constant speed, 5 meters every 4 seconds. How long does it take him to swim 114 meters?

distance (meters)	time (seconds)
5	4
114	

2. A factory produces 3 bottles of sparkling water for every 8 bottles of plain water. How many bottles of sparkling water does the company produce when it produces 600 bottles of plain water?

number of bottles of sparkling water	number of bottles of plain water

3. A certain shade of light blue paint is made by mixing $1\frac{1}{2}$ quarts of blue paint with 5 quarts of white paint. How much white paint would you need to mix with 4 quarts of blue paint?
4. For each of the previous three situations, write an equation to represent the proportional relationship.

4 Finishing the Race and More Orange Juice (Optional)

Student Task Statement

1. Lin runs $2\frac{3}{4}$ miles in $\frac{2}{5}$ of an hour. Tyler runs $8\frac{2}{3}$ miles in $\frac{4}{3}$ of an hour. How long does it take each of them to run 10 miles at that rate?
2. Priya mixes $2\frac{1}{2}$ cups of water with $\frac{1}{3}$ cup of orange juice concentrate. Diego mixes $1\frac{2}{3}$ cups of water with $\frac{1}{4}$ cup orange juice concentrate. How much concentrate should each of them mix with 100 cups of water to make juice that tastes the same as their original recipe? Explain or show your reasoning.
