

Lesson 4: Converting Units

Let's convert measurements to different units.

4.1: Number Talk: Fractions of a Number

Find the values mentally.

$$\frac{1}{4} \text{ of } 32$$

$$\frac{3}{4} \text{ of } 32$$

$$\frac{3}{8} \text{ of } 32$$

$$\frac{3}{8} \text{ of } 64$$

4.2: Road Trip

Elena and her mom are on a road trip outside the United States. Elena sees this road sign.

Elena's mom is driving 75 miles per hour when she gets pulled over for speeding.

1. The police officer explains that 8 kilometers is approximately 5 miles.
 - a. How many kilometers are in 1 mile?
 - b. How many miles are in 1 kilometer?
2. If the speed limit is 80 kilometers per hour, and Elena's mom was driving 75 miles per hour, was she speeding? By how much?

4.3: Veterinary Weights

A veterinarian uses weights in kilograms to figure out what dosages of medicines to prescribe for animals. For every 10 kilograms, there are 22 pounds.

1. Calculate each animal's weight in kilograms. Explain or show your reasoning. If you get stuck, consider drawing a double number line or table.
 - a. Fido the Labrador weighs 88 pounds.
 - b. Spot the Beagle weighs 33 pounds.
 - c. Bella the Chihuahua weighs $5\frac{1}{2}$ pounds.

2. A certain medication says it can only be given to animals over 25 kilograms. How much is this in pounds?

4.4: Cooking with a Tablespoon

Diego is trying to follow a recipe, but he cannot find any measuring cups! He only has a tablespoon. In the cookbook, it says that 1 cup equals 16 tablespoons.

1. How could Diego use the tablespoon to measure out these ingredients?

$\frac{1}{2}$ cup almonds	$1\frac{1}{4}$ cup of oatmeal	$2\frac{3}{4}$ cup of flour
---------------------------	-------------------------------	-----------------------------

2. Diego also adds the following ingredients. How many cups of each did he use?

28 tablespoons of sugar

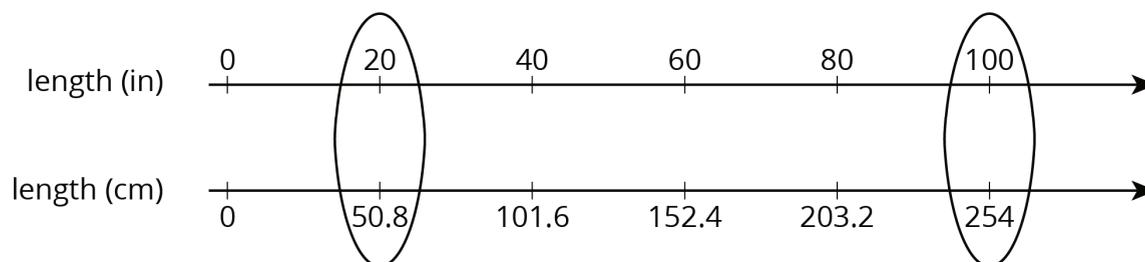

6 tablespoons of cocoa powder

Lesson 4 Summary

When we measure something in two different units, the measurements form an equivalent ratio. We can reason with these equivalent ratios to convert measurements from one unit to another.

Suppose you cut off 20 inches of hair. Your Canadian friend asks how many centimeters of hair that was. Since 100 inches equal 254 centimeters, we can use equivalent ratios to find out how many centimeters equal 20 inches.

Using a double number line:

Using a table:

length (in)	length (cm)
100	254
1	2.54
20	50.8

One quick way to solve the problem is to start by finding out how many centimeters are in 1 inch. We can then multiply 2.54 and 20 to find that 20 inches equal 50.8 centimeters.
