## Lesson 16 Practice Problems

1. Kiran and his cousin work during the summer for a landscaping company. Kiran's cousin has been working for the company longer, so his pay is 30\% more than Kiran's. Last week his cousin worked 27 hours, and Kiran worked 23 hours. Together, they earned $\$ 493.85$. What is Kiran's hourly pay? Explain or show your reasoning.
2. Decide which story can be represented by the system of equations $y=x+6$ and $x+y=100$. Explain your reasoning.
a. Diego's teacher writes a test worth 100 points. There are 6 more multiple choice questions than short answer questions.
b. Lin and her younger cousin measure their heights. They notice that Lin is 6 inches taller, and their heights add up to exactly 100 inches.
3. Clare and Noah play a game in which they earn the same number of points for each goal and lose the same number of points for each penalty. Clare makes 6 goals and 3 penalties, ending the game with 6 points. Noah earns 8 goals and 9 penalties and ends the game with -22 points.
a. Write a system of equations that describes Clare and Noah's outcomes. Use $x$ to represent the number of points for a goal and $y$ to represent the number of points for a penalty.
b. Solve the system. What does your solution mean?
4. Solve: $\left\{\begin{array}{l}y=6 x-8 \\ y=-3 x+10\end{array}\right.$
5. a. Estimate the coordinates of the point where the two lines meet.

b. Choose two equations that make up the system represented by the graph.
i. $y=\frac{5}{4} x$
ii. $y=6-2.5 x$
iii. $y=2.5 x+6$
iv. $y=6-3 x$
v. $y=0.8 x$
c. Solve the system of equations and confirm the accuracy of your estimate.
(From Unit 5, Lesson 14.)
