

# Lesson 11: Comparing Groups

## Cool Down: Prices of Homes

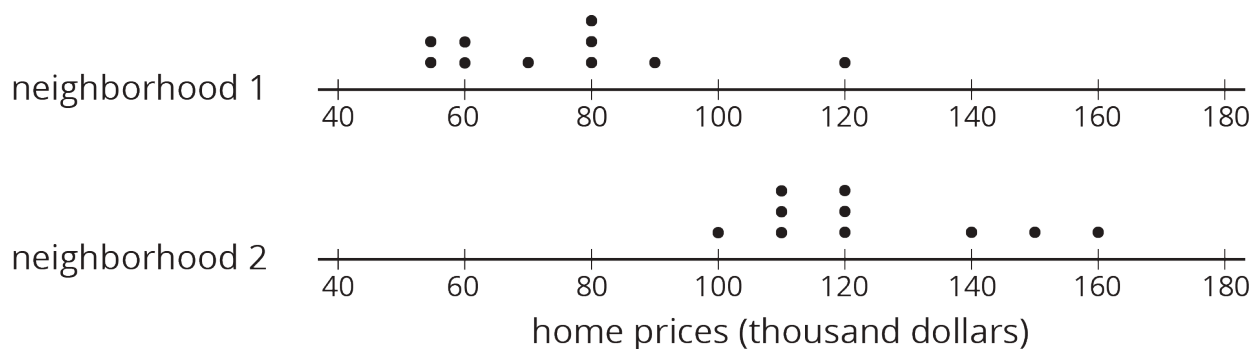

Noah's parents are interested in moving to another part of town. They look up all the prices of the homes for sale and record them in thousands of dollars.

neighborhood 1

80      55      80      120      60      90      60      80      55      70

neighborhood 2

110      120      160      110      100      110      140      150      120      120

Find the mean and MAD for each of the neighborhoods. Then decide whether the two groups are very different or not.
