Watch Your Remainder Stage 2 Recording Sheet

Directions:
- Each partner:
  - Pick 7 cards and use at least 5 of them to create a division expression with a two-digit divisor.
  - Write the expression to represent the quotient (For example, for $1,119 \div 25$ you would write $(25 \times 44) + 19$ and your score would be 19.)
  - Check your partner's work to make sure you agree.
  - Your score for the round is the remainder of your expression
- Take new cards so that you have 7 cards to start the next round.
- The partner who has the fewest points once the recording sheet is full wins the game.
