## Lesson 9: Increasing and Decreasing Functions

- Let's look at what a graph does based on a situation.

## 9.1: Comparing Values

For each pair of numbers, write $=,<$, or $>$ in the blank to make a true equation or inequality. Be prepared to share your reasoning.

1. -6 $\qquad$ -9
2. $\frac{7}{3}-\frac{13}{6}$
3. $5.2 \_\frac{53}{11}$
4. $5(3-6)$ $\qquad$ $15-6$
5. Let $f(x)=5-2 x$.
a. $f(3)$ $\qquad$ $f(5)$
b. $f(-3)$ $\qquad$ $f(-4)$
c. $f(-1)$ $f(1)$

## 9.2: What Could It Be?

Describe $f(x)$ and $g(x)$ with a situation that could fit the given graphs. Explain your reasoning.

2.

3.

## 9.3: Cities, Towns, and Villages

Draw an example of a graph that shows two functions as they are described. Make sure to label the functions.

1. The population of 2 cities as functions of time so that city $A$ always has more people than city B.

2. The population of 2 towns as functions of time so that town $A$ is larger to start, but then town $B$ gets larger.

3. The population of 2 villages as functions of time so that village $A$ has a steady population and village B has a population that is initially large, but decreases.
