

Lesson 16: Two Related Quantities, Part 1

Cool Down: Baking Brownies

A brownie recipe calls for 1 cup of sugar and $\frac{1}{2}$ cup of flour to make one batch of brownies. To make multiple batches, the equation $f = \frac{1}{2}s$ where f is the number of cups of flour and s is the number of cups of sugar represents the relationship. Which graph also represents the relationship? Explain how you know.
