

Lesson 4: Fitting a Line to Data

Cool Down: A 1 Foot Foot

Here is a scatter plot that shows lengths and widths of 20 left feet, together with the graph of a model of the relationship between foot length and width.

1. Draw a box around the point that represents the foot with length closest to 29 cm.
2. What is the approximate width of this foot?
3. What width does the model predict for a foot with length 29 cm?
